Title: Average calculation error due to dividing by 4 instead of 5
Steps:
1)Open the file fff.java.
2)Enter 5 student grades.
3)Check the Average result.
Description:
The code collects 5 grades in the loop (line 23), but in line 26, it divides the total sum by 4. This makes the Average and the Grade wrong.

```
TEST2 C:\Users\csc\IdeaProjects\TEST2
.idea
out

Scratches and Consoles
```

```
3   public class fff {
5       public static void main(String[] args) {
23          for (int i = 0; i < 5; i++) {
24              sum += grades[i];
25          }
26          double average = (double) sum / 4;
27
28          String letterGrade;
29          if (average < 50) letterGrade = "F";
30          else if (average >= 50 ) letterGrade = "C";
31          else if (average >= 70 ) letterGrade = "B";
32          else letterGrade = "A";
33
34          System.out.println("\n--- Result ---");
35          System.out.println("Average: " + average);
36          System.out.println("Grade: " + letterGrade);
37
38          scanner.close();
```

```
fff

--- Result ---
Average: 61.25
Grade: C

Process finished with exit code 0
```

Result:
Expected Result: The sum should be divided by 5 (Total grades).
Actual Result: The sum is divided by 4, so the calculation result is incorrect
Severity: High
Priority: High

Title: Grade is always "C" even when the average is high
Steps:
1)Open the student grading program.
2)Enter high grades (Example: 90, 85, 80, 75, 70).
3)Click "Calculate" button.
Description:
The system calculates the average correctly, but the Grade is always C. It does not show Grade B or Grade A even if the student has high marks. This happens in Test Cases 9 to 15.

```

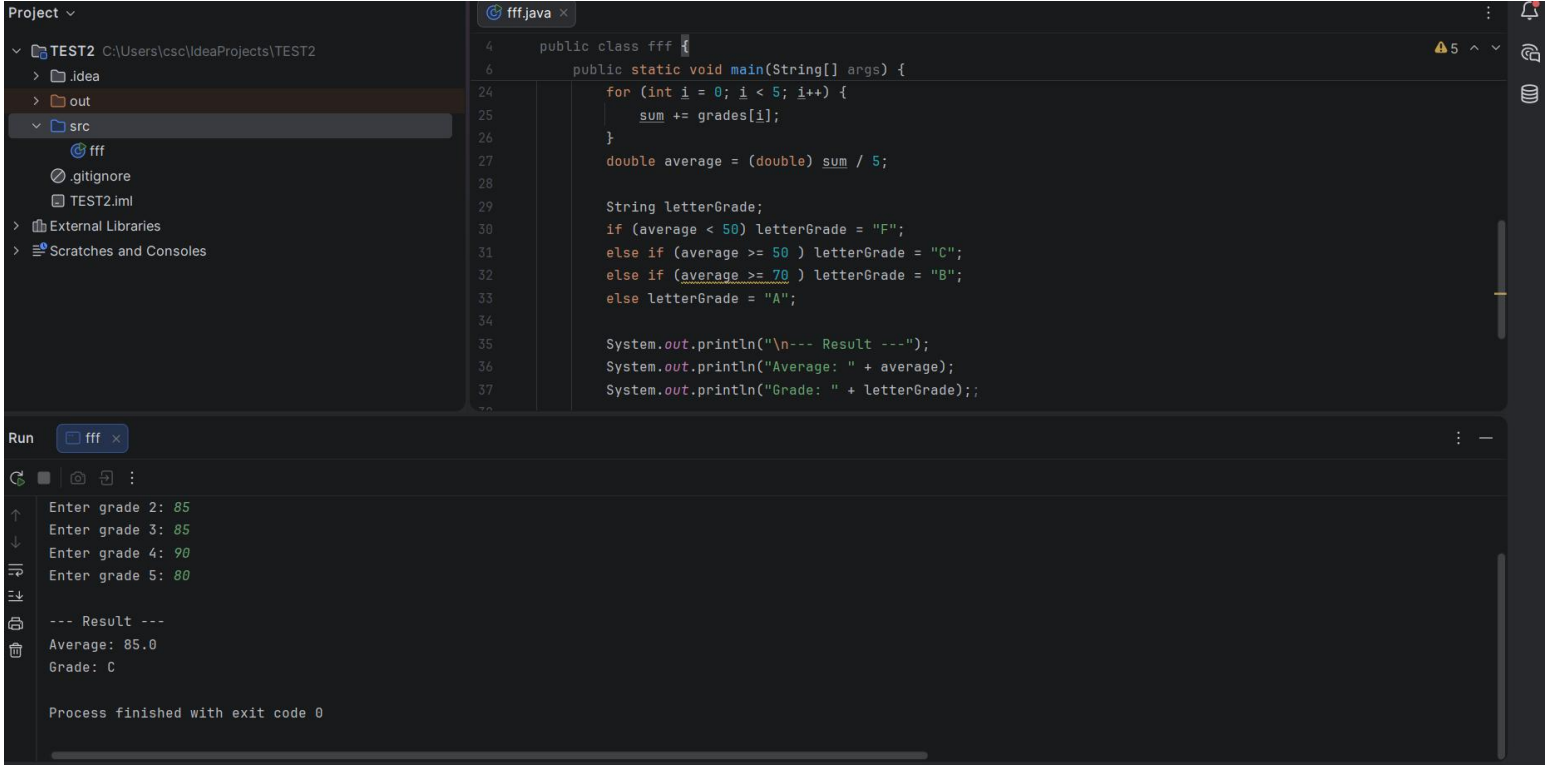
.gitignore
TEST2.iml
External Libraries
Scratches and Consoles
```

```
5       public static void main(String[] args) {
23          for (int i = 0; i < 5; i++) {
24              sum += grades[i];
25          }
26          double average = (double) sum / 5;
27
28          String letterGrade;
29          if (average < 50) letterGrade = "F";
30          else if (average >= 50 ) letterGrade = "C";
31          else if (average >= 70 ) letterGrade = "B";
32          else letterGrade = "A";
33
34          System.out.println("\n--- Result ---");
35          System.out.println("Average: " + average);
36          System.out.println("Grade: " + letterGrade);
```

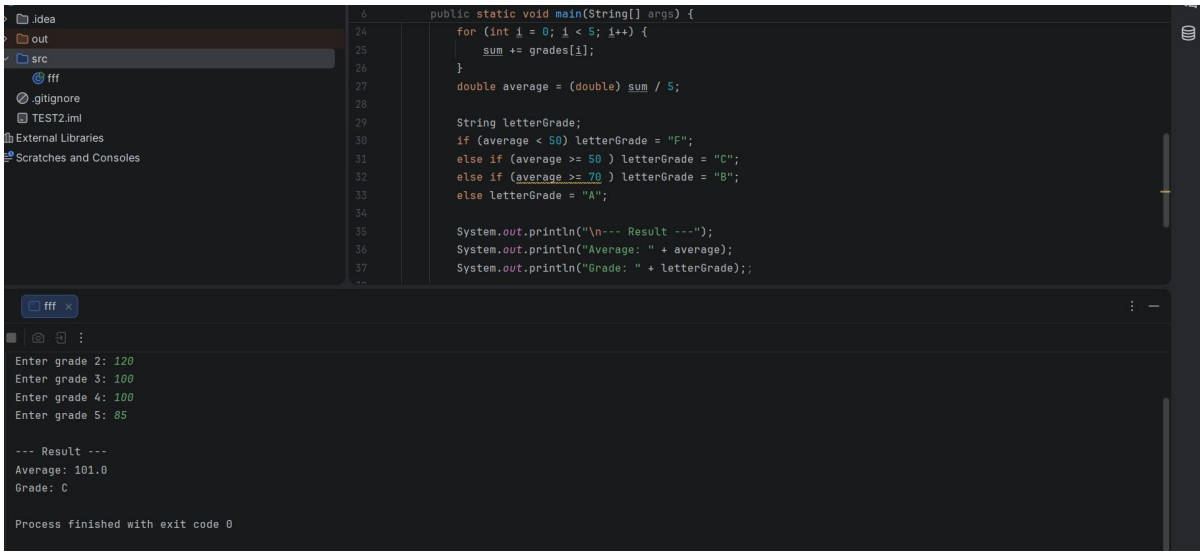
```
fff
Enter grade 2: 85
Enter grade 3: 80
Enter grade 4: 75
Enter grade 5: 70

--- Result ---
Average: 80.0
Grade: C
```



Expected Result: The system should show the correct Grade (A or B).
Actual Result: The system only shows Grade C.
Severity: High
Priority: High

Title: System accepts marks higher than 100 without error
Steps:
1)Open the student grading program.
2)Enter a mark higher than 100 (Example: 120, 100, 100, 100, 85).
3)Click "Calculate" button.
Description:
The system should only accept marks between 0 and 100. However, in Test Case 16, I entered 120, and the system accepted it instead of showing an error. This makes the final average and grade wrong.



Expected Result: System shows "Error" for marks over 100.
Actual Result: System accepts the mark and shows a wrong grade.
Severity: High
Priority: High
