# Sauce demo

## user login

### + Prerequisites:

- The user has access to the Sauce Demo .
- The internet is enabled .
- Valid username and password are available (e.g., standard _user) .

### + Acceptance Criteria:

- **As a user** I will open the login page of the application .
- **As a user** I should be able to enter:
  - o Username in the username field.
  - o Password in the password field .
- **As a user** when clicking on the 'Login' button:
  - o The system validates the entered credentials.
  - o The system checks if the username and password are correct .
- **As a user**:
  - o If I enter valid credentials, I will be redirected to the Products page .
- **As a user:**
  - o If I enter invalid username or password, an error message will be displayed .
- **As a user:**
  - o If any field (username/password) is empty, the system should prevent login and show validation message .

### + Expected Results:

- User is successfully logged in with valid credentials and redirected to Products page .
- Error message is displayed in case of:
  - o Invalid credentials.
  - o Empty fields.

## +Dependencies:

- Login API and user data must be available.
- Front-end login form must be implemented with validation.

- Error handling must display proper messages.
- Successful login must create a session and redirect the user.

# Sauce demo

## Product Gallery and Sorting

### + Prerequisites:

- The user is successfully logged into the Sauce demo application.
- The user is redirected to the products page (/inventory.html).
- The internet connection is stable.

### + Acceptance Criteria:

- **As a client user**, I need to be able to view a clear list of products where each card displays: Product Image, Title, Description, Price, and an "Add to cart" button.
- **As a client user**, I need to be able to sort the product list by name and price to find the products that fit my budget or preferences quickly.
- **As a standard user** who is attempting to view the products, the default sorting option displayed for the interface will be "Name (A to Z)".
- **As a client user** attempting to change the product order, when s/he attempts to click any of the other sorting options (Name Z to A / Price low to high / Price high to low), the application will immediately reorder the products according to the selected criteria without requiring a page refresh.
- All product images must load correctly and the price must be displayed in the standard format: $XX.XX.

### + Expected Results:

- The user can view all available products and specify the required sorting criteria before adding any item to the cart.
- The user can view all available products with their full details clearly displayed on each product card.

- All products on the screen will be reordered accurately according to the changed sorting option without any UI broken issues.
- The total number of displayed products remains unchanged after applying any sorting option.

### + Dependencies:

- The inventory data (names, descriptions, and prices) must be properly mapped and retrieved.
- Product Details page must be implemented and accessible via product name or image click.
- The sorting functionality must be supported and functional on the front-end without requiring any back-end API calls.

## Sauce demo

### Shopping Cart Management

### +Prerequisites:

- The user is successfully logged into the Sauce demo application.
- The user is on the products page or a specific product details page.
- At least one product is available in the inventory to be added.
- The internet connection is stable.

### +Acceptance Criteria:

- **As a client user**, I need to be able to add any product to the cart by clicking the "Add to cart" button, and the button should immediately change to "Remove".
- **As a user**, when I add an item, the shopping cart badge (the red circle on the cart icon) must update automatically to show the correct count of items.
- **As a client user**, I need to be able to remove an item from the cart either from the main gallery page or from within the cart page itself.
- **As a standard user**, when I click on the shopping cart icon, I should be redirected to the "Your Cart" page (/cart.html) to review my selected items.
- In the "Your Cart" page, each item must display its: Quantity, Title, Description, and Price accurately.

- **As a user**, I should be able to click "Continue Shopping" to return to the product gallery or "Checkout" to proceed to the next stage.

### +Expected Results:

- Users can add or remove items easily with instant UI changes.
- The cart icon badge updates correctly to show the number of items.
- All selected products appear in the "Your Cart" page with their correct names and prices.
- The user can navigate smoothly between the products page and the cart.

### +Dependencies:

- The product list must be loaded correctly from the system.
- The "Checkout" button must be ready to take the user to the next step.

## Sauce demo

### Checkout process

### +Prerequisites:

- The user is successfully logged into the Sauce demo application.
- The user is at the checkout page.
- The user has all items checked and selected.
- The internet connection is stable.

### + Acceptance Criteria:

- **As a client user**, I need to make sure that all my items are selected.
- **As a client user**, I need to see the total price including VAT.
- **As a client user** There should be an option for me to put the card's info or e-wallet if available.
- All product images must load correctly and the price must be displayed in the standard format: $XX.XX.
- Total price should be including VAT or the application should include information about VAT percentage for the user to calculate.

### + Expected Results:

- The user can view all selected items in the cart and make sure they're right with their icons loaded correctly.
- The user can view each product's price and total price accordingly.
- There should be a specific location or a map add-on to reassure the user that their location is selected correctly.
- The total number of displayed products remains unchanged after applying any sorting option.

## Sauce demo

### Logout process

### +Prerequisites:

- The user is successfully logged into the Sauce demo application.
- The user is at any internal page (Products, Cart, or Checkout).
- The sidebar menu is accessible.
- The internet connection is stable.

### + Acceptance Criteria:

- **As a client user,** I need to be able to access the sidebar menu by clicking the icon (☰) located at the top-left of the screen.
- **As a client user,** clicking "Logout" must terminate the session and redirect me to the login page immediately.
- **As a client user,** the system must prevent accessing internal pages via the browser's "Back" button after logout.
- **As a client user,** any attempt to directly access an internal page (e.g., /inventory.html) via the URL bar after logout must redirect the user back to the login page.
- All user session data must be cleared, and the login fields should be empty.

### + Expected Results:

- The user is redirected to the login screen successfully.

- No previous session data (cart items, selected filters, or product state) should persist or be visible after the user logs back in.
- The redirection happens smoothly without any UI broken issues.

### + Dependencies:

- The user must have a valid and active account on the Sauce demo platform.
- The sidebar menu and logout functionality must be integrated into the current sprint build.
- The server must be capable of terminating the user session upon receiving the logout request.
- Login page must be implemented and accessible as the redirect target upon logout.
